WIRELESS SKI INSTALLATION FOR TRAINING

PROFESSIONAL TIMING

WIRELESS SKI INSTALLATION FOR TRAINING

Quantity	Reference	Description
1	HL 7-1	Start gate FIS with double contacts and double outputs
1	HL 7-114	Additional wand for start gate HL 7-1
1	HL 620	Impulse & data transmission system via radio (complete set)
1	HL 2-31	Photocell with reflector, cable 5m and transport case (dist. 20m)
1	HL 4	2 supports for Photocell HL 2-31
1	CP 520	Chronopinter 520 (for back-up and manual timing)
10	HL 705-3	Paper rolls for CP 520

Installation allowing for the wireless timing of a ski race.

This offer is particularly addressed to the trainers, clubs or teams who go from a place to another for the training.

The automatic return start gate HL7-3 gives an impulse which is transmitted without wire to the timing device thanks to our HL620 radio impulse transmission system.

Our HL620 radio impulse & data system, of a power of 0,5 W is homologated without concession everywhere in Europe. To the condition that a back-up timing device is linked to the start gate, this installation is also homologated for national races with points (ex. Swiss-Ski)

Mobility, rapidity and easy installation are the main advantages of this configuration. We also draw your attention to the precision aspect of the system as the timing impulse is transmitted with a fixed delay of 100 ms with a precision better than 1/100'000th of a second !

The athletes who train very hard along the season deserve accurate time measurements. This aspect is essential in order to ensure the improvements of performances. Some cheap wireless devices that can be found on the market are far to respect the minimal precision requirements. In purchasing TAG Heuer devices you are certain to sanction accurately athletes' performances.
