Installation allowing for the wireless timing of a ski race and for the printing of official results

Thanks to the SPLITMASTER 650, you time a race without cables. The power of its transmission (2,5 W or 5 W) allows for the reception of timing impulses and voice communication over long distances in total security. Due to its power, the SPLITMASTER 650 is subject to the hire of a telecom licence that you can obtain from your competent local authorities.

The SPLITMASTER 650 is the unique wireless timing device of the market allowing for the voice communication between start and finish.

The Receiver transmits the timing data directly to the PC. Our SKI software allows for the complete management of any international or national race with points (FIS, Swiss-Ski, ÖSV, DSV, etc..). Automatic entries of competitors thanks to the federation data bases, timing, official results, penalty calculation, return of the results in the specified format, etc..

Mobility, reliability of transmission and wireless voice communication are the main advantages of this configuration.
